## **INTRODUCTION**

The Exobiology Program, within the Office of Space Science and Applications of the National Aeronautics and Space Administration, is an integrated program designed to investigate those processes that may have been responsible for or related to the origin, evolution, and distribution of life in the universe.

This report contains a listing of 1988 publications resulting from research supported by the Exobiology Program. Our intent in compiling this report is twofold: We want to provide the scientific community with an annual publication listing (as we have done since 1975) of current NASA-supported research in this field, and we hope to stimulate the exchange of information and ideas among scientists working in the different areas of the program.

Research supported by the Exobiology Program is explored in the areas of Cosmic Evolution of Biogenic Compounds, Prebiotic Evolution, Early Evolution of Life, and Evolution of Advanced Life. Pre-mission and pre-project activities supporting these areas are supported in the areas of Solar System Exploration and Search for Extraterrestrial Intelligence. The Planetary Protection subject area is included here because of its direct relevance to the Exobiology Program.

### **EACH AREA IS DEFINED AS FOLLOWS:**

**COSMIC EVOLUTION OF BIOGENIC COMPOUNDS** focuses on the history of the biogenic elements (C,H,N,O,P,S) and their compounds in the galaxy and the early solar system. This includes: (1) tracing the physical and chemical pathways taken by the biogenic elements and their compounds from their origins in stars to their incorporation in the pre-planetary bodies; (2) determining the kinds of measurements that can be made on the biogenic elements and compounds in the galaxy and solar system and prebiotic evolution and origin of life; and (3) determining the ways in which the physical and chemical properties of the biogenic elements and compounds may have influenced the course of events during the formation of the solar system and the component bodies.

**PREBIOTIC EVOLUTION** involves research and analysis in two major areas: (1) the consequences of planetary evolution on the physical environment of the Earth and planets, and (2) the evolution of molecules and molecular systems under the constraints imposed by physical environment and the appearance, a posteriori, of living systems on Earth. It also assesses the importance of the physical-chemical processes associated with the dynamic development of planetary surfaces.

**EARLY EVOLUTION OF LIFE** focuses on the nature of the most primitive organisms, determining the environment in which they evolved, and the way in which they influenced that environment. Investigations are executed through the use of the molecular record in living organisms and the geological record in rocks. These records are used to determine when and in what setting life first appeared; to determine the characteristics of the first successful living organisms; to understand the phylogeny and physiology of microorganisms that inhabit hydrothermal areas now thought to be analogs of primitive environments; to determine the original nature of biotic energy transduction, membrane function, and information processing through study of extant microbes; and to elucidate the physical, chemical, and biotic forces operating on microbial evolution.

**EVOLUTION OF ADVANCED LIFE** examines the influence of astrophysical, stellar and solar system events on the evolution of advanced life on Earth. Research in this area also attempts to develop a program plan for a paleontological data base; to understand possible evolutionary pathways for advanced life; and to investigate ancient atmospheres.

**SOLAR SYSTEM EXPLORATION** focuses on providing specific information on the elemental and chemical composition, mainly with respect to gases and volatiles, of the atmospheres and surfaces of solar system bodies, including planets and their satellites, comets, asteroids, meteorites, and dust in space. Improved methods, instrumentation, and experiments will be developed for in situ chemical analyses of the volatile species associated with the bodies to be investigated.

**SEARCH FOR EXTRATERRESTRIAL INTELLIGENCE (SETI)** involves the search for extraterrestrial intelligent life by detecting signals in the electromagnetic spectrum. Principal emphasis has been on technology development for the microwave observing project.

**PLANETARY PROTECTION** focuses on environmental protection of planets of biological interest from potentially harmful contamination from terrestrial sources during future exploration, based on explicit guidelines established for each planet and for each type of mission. It also focuses on protection of the Earth from potential hazards posed by returned sample missions.

This bibliography is divided into the seven areas noted above. Within each research area, references are listed alphabetically by author. Authors who are Principal Investigators are identified by an asterisk. In addition, current addresses for all Principal Investigators are given in the Appendix.

We wish to thank all the participants in the Exobiology Program for their cooperation in responding to our request for a listing of their 1988 publications. We also wish to thank Janice Susan Wallace for her editorial and technical assistance and Rodney P. Johnson for his technical assistance.

McKay\*, C.P.

Living and working on Mars.

In: *The NASA Mars Conference* (Reiber, D.B., Ed.). San Diego, CA: Univelt, p. 511-522, 1988. (GWU 10311)

McKay\*, C.P.; Mancinelli\*, R.L.; Stoker, C.R.; Carle\*, G.C.; Wharton\*, R.A., Jr.; Boston, P.J.

Exobiology instruments: Experiments for future Mars missions (Abstract).

In: *Abstracts, Twenty-Seventh Plenary Meeting of the Committee on Space Research*, Espoo, Finland, July 18-29, 1988, p. 281. (GWU 10520)

McKay\*, C.P.; Nedell, S.S.

Are there carbonate deposits in the Valles Marineris, Mars?

*Icarus* 73: 142-148, 1988. (GWU 8939)

McKay\*, C.P.; Scattergood\*, T.W.; Pollack, J.B.; Borucki, W.J.; Van Ghysseghem, H.T.

High-temperature shock formation of N<sub>2</sub> and organics on primordial Titan.

*Nature* 332(6164): 520-522, 1988. (GWU 10157)

Oro\*, J.

Martian oxidation process and selection of ancient sedimentary samples for bio-organic analysis.

In: *Workshop on Mars Sample Return Science* (Drake, M.J., Greeley, R., McKay, G.A., Blanchard, D.P., Carr, M.H., Gooding, J., McKay, C.P., Spudis, P.D., Squyres, S.W., Eds.). Houston: Lunar and Planetary Institute, p. 134-135, 1988. (LPI-Technical-Report-88-07) (GWU 10289)

Owen\*, T.

Titan's atmosphere: Some new results (Abstract).

In: *Abstracts, Twenty-Seventh Plenary Meeting of the Committee on Space Research*, Espoo, Finland, July 18-29, 1988, p. 285. (GWU 10220)

Owen\*, T.; De Bergh, C.; Lutz, B.; Maillard, J.P.

Deuterium in the outer solar system (Abstract).

In: *Abstracts, Twenty-Seventh Plenary Meeting of the Committee on Space Research*, Espoo, Finland, July 18-29, 1988, p. 41. (GWU 10206)

Owen\*, T.; Maillard, J.P.; de Bergh, C.; Lutz, B.

Deuterium on Mars: The abundance of HDO and the value of D/H.

*Science* 240: 1767-1770, 1988. (GWU 10495)

Owen\*, T.; Maillard, J.P.; de Bergh, C.; Lutz, B.

Evolution of the Martian atmosphere (Abstract).

In: *Abstracts, Twenty-Seventh Plenary Meeting of the Committee on Space Research*, Espoo, Finland, July 18-29, 1988, p. 32. (GWU 10210)

Pollack, J.B.; Cassen, P.; Korycansky, D.; Bodenheimer, P. (McKay, C.P. = P.I.)

Outer planet atmospheres: A possible source of satellite forming disks (Abstract).

In: *Abstracts, Twenty-Seventh Plenary Meeting of the Committee on Space Research*, Espoo, Finland, July 18-29, 1988, p. 296. (GWU 10200)

Pollack, J.B.; Haberle, R.M. (McKay, C.P. = P.I.)

Simulations of the general circulation of the Martian atmosphere: Implications for future spacecraft missions (Abstract).

In: *Abstracts, Twenty-Seventh Plenary Meeting of the Committee on Space Research*, Espoo, Finland, July 18-29, 1988, p. 32. (GWU 10209)

- Pollack, J.B.; Simonelli, D.; McKay\*, C.P.  
Distribution of carbon in the early outer solar system: Implications for the Voyager Neptune encounter (Abstract).

**Robert Rein**  
Roswell Park Memorial Institute  
New York State Department of Health  
666 Elm Street  
Buffalo, NY 14263

**Alexander Rich**  
Department of Biology  
Massachusetts Institute of Technology  
Cambridge, MA 02139

**Jonathan Roughgarden**  
Department of Biological Sciences  
Stanford University  
Stanford, CA 94305

**John D. Rummel**  
Program Manager, Exobiology  
Code EBR  
National Aeronautics and Space  
Administration  
600 Independence Avenue, S.W.  
Washington, D.C. 20546

**Carl Sagan**  
Center for Radiophysics and Space  
Research  
Laboratory for Planetary Studies  
Space Sciences Building  
Cornell University  
Ithaca, NY 14853

**E.H. Satorius**  
California Institute of Technology  
NASA, Jet Propulsion Laboratory  
4800 Oak Grove Drive  
Pasadena, CA 91109

**Thomas Scattergood**  
State University of New York  
Stony Brook, NY 11794

**J. William Schopf**  
Department of Earth and Space  
Sciences  
3806 Geology Building  
University of California  
Los Angeles, CA 90024

**J. John Sepkoski, Jr.**  
Department of Geophysical Sciences  
University of Chicago  
5734 South Ellis Avenue  
Chicago, IL 60637

**Jill Tarter**  
NASA, Ames Research Center  
SETI Institute  
Mail Stop 229-8  
Moffett Field, CA 94035

**Peter Tsou**  
California Institute of Technology  
NASA, Jet Propulsion Laboratory  
4800 Oak Grove Drive  
Pasadena, CA 91109

**David Usher**  
Department of Chemistry  
Baker Laboratory  
Cornell University  
Ithaca, NY 14853

**Jose R. Valentin**  
NASA, Ames Research Center  
Mail Stop 239-12  
Code SSS  
Moffett Field, CA 94035

**James C.G. Walker**  
Department of Atmospheric and Oceanic  
Science  
Space Physics Research Laboratory  
Space Research Building  
University of Michigan  
Ann Arbor, MI 48109

**Arthur L. Weber**  
The Salk Institute for Biological  
Studies  
P.O. Box 85800  
San Diego, CA 92138

**Robert A. Wharton, Jr.**  
Desert Research Institute  
Atmospheric Science Center  
University of Nevada  
P.O. Box 60220  
Reno, NV 89506

**Carl R. Woese**  
Department of Microbiology  
131 Burrill Hall  
University of Illinois  
407 South Goodwin Avenue  
Urbana, IL 61801

**George U. Yuen**  
Department of Chemistry  
Arizona State University  
Tempe, AZ 85287

**Yuk Ling Yung**  
Division of Geology and Planetary  
Sciences, 170-25  
California Institute of Technology  
Pasadena, CA 91125

## Report Documentation Page

1. Report No. NASA TM-4169	2. Government Accession No.	3. Recipient's Catalog No.	
4. Title and Subtitle Publications of the Exobiology Program for 1988 - A Special Bibliography		5. Report Date February 1990	
		6. Performing Organization Code EBR	
7. Author(s)		8. Performing Organization Report No.	
		10. Work Unit No.	
9. Performing Organization Name and Address Science Communication Studies, DCE The George Washington University Washington, DC 20006 and NASA Office of Space Science and Applications		11. Contract or Grant No. NASW-4324	
		13. Type of Report and Period Covered Technical Memorandum	
12. Sponsoring Agency Name and Address National Aeronautics and Space Administration Washington, DC 20546		14. Sponsoring Agency Code EBR	
15. Supplementary Notes  For previous bibliography in this series, see NASA TM-4121			
16. Abstract  List of 1988 publications resulting from research pursued under the auspices of NASA's Exobiology Program.			
17. Key Words (Suggested by Author(s)) chemical evolution, prebiotic evolution, evolution of life, origin of life, exobiology, extraterrestrial life, SETI, solar system exploration, bibliography		18. Distribution Statement Unclassified - Unlimited  Subject Category 55	
19. Security Classif. (of this report) Unclassified	20. Security Classif. (of this page) Unclassified	21. No. of pages 72	22. Price A04
